

By using NzingaNet hosted services, you can:

- Delight your employees with the freedom of using devices of their choice
- Deliver workspaces on any device while preserving data security
- Relieve users or IT personal of planning device or software upgrades
- Ensure secure access to corporate data whenever, wherever
- Provide a predictable monthly expense, avoiding large capital IT outlays

Platform as a Service (PaaS)

NzingaNet Platform as a Service (PaaS) is a way our customer rent hardware, operating systems, storage, and network capacity over the Internet. The service delivery model allows you the customer to rent virtualized servers and associated services for running existing applications or developing and testing new ones. With PaaS, operating system features can be changed and upgraded frequently. Geographically distributed development teams can work together on software development projects. Services can be obtained from diverse sources that cross international boundaries
